

TRUE DISCOVERY

CONTINUOUS COMPLIANCE

DPDPA 2023

Consent is a data structure, not a checkbox.

A true-discovery engine that parses your code, schemas, endpoints and unstructured artifacts for real data lineage, processing purpose and DPDP violations — down to the individual data principal.

INDUSTRIES	WORKS WITH	BUILT FOR
BFSI & fintech · Retail & D2C · Manufacturing · Media & OTT · Healthcare · PSU & government	Code repos · DB schemas · API endpoints · Unstructured stores · Private cloud	DPOs & privacy leads · CISOs & security teams · General counsel & compliance · CTOs & engineering leaders

up to ₹250 Cr PENALTY RANGE · STACKS CUMULATIVELY PER INCIDENT	13 May 2027 FULL COMPLIANCE DEADLINE · PHASED SINCE NOV 2025	B2C · B2B · B2B2C EVERY MODEL IN SCOPE: CONSENT, PROCESSOR & INTERMEDIARY CHAINS
--	--	--

Two common approaches to DPDP. One gap remains.

APPROACH A Consent Management SaaS A licensed platform to capture, store and manage consent going forward. It doesn't know what's already been processed without consent, across your existing systems.	APPROACH B Audit / consulting partner A gap assessment reliant on interviews and self-reported inventory. A snapshot in time, not a living system of record.	HUMAINEETI True discovery Parses actual code, schema, legacy data and artifacts for data lineage — continuously, down to data-principal granularity and processing purpose.
---	--	---

True discovery — more than finding data at rest It parses every line of your code, your schemas, your endpoints and your unstructured artifacts for source-of-truth lineage, purpose and violations.

TRUE DISCOVERY — MORE THAN FINDING THEM AT-REST			
IT PARSES Every line of your code	IT PARSES Schemas	IT PARSES Endpoints	IT PARSES Unstructured artifacts
For source-of-truth data lineage, processing purpose and violations of the DPDP sections and rules, down to individual data-principal granularity.			

At a glance

	CONSENT SAAS	AUDIT / GRC	DPDP-AID
Sees legacy data already collected	—	—	✓
Traces cross-border transfers at source	—	—	✓
Maps every PII field to a discovered processing activity	—	—	✓
Continuous, not a one-time snapshot	✓	—	✓
Autonomous DPIA, ROPA register, DSAR response, clause-to-control	—	—	✓
Autonomous agents inside your own secured private cloud	—	—	✓

What you get

- › True discovery across code, schemas, endpoints and unstructured artifacts
- › Every PII field mapped to a discovered processing purpose
- › Autonomous DPIA, ROPA register, DSAR response and clause-to-control
- › Source-of-truth data lineage down to individual data-principal granularity
- › Cross-border transfers traced at source, not from a questionnaire
- › Agents run inside your own secured private cloud

INCLUDED FREE · DEMO + POC · ONE APPLICATION OR REPOSITORY · NO COST · IN YOUR ENVIRONMENT

Point true discovery at one application — see what's actually there.

HOW IT RUNS

- We run true discovery on one application, repo or schema of your choosing
- Agents deploy inside your own secured environment — data never leaves
- You see discovered lineage and purpose, not a self-reported inventory

WHAT YOU PROVIDE

- One application, repository or database schema in scope
- A private-cloud or VPC environment for the agents to run in
- A privacy or engineering contact for a short scoping call

WHAT YOU GET BACK

- A discovered PII inventory with lineage and processing purpose
- A list of DPDP sections and rules currently at risk
- A sample autonomous ROPA entry and DPIA, generated from real data
